**RE: PacifiCorp (U 901-E) Public Safety Power Shut-Off Report for October 25,
2020 Watch Event**

Dear Director Palmer,

In accordance with Ordering Paragraph 2 of Decision (D.) 12-04-024, Section II.A of the California Public Utilities Commission's (Commission) Resolution ESRB-8, D.19-05-042, and D.20-05-051, PacifiCorp submits this Public Safety Power Shut-off (PSPS) Report for a October 25, 2020 PSPS watch that occurred in the company's service territory.

As required, this report has been verified by an officer of PacifiCorp in accordance with Rule 1.11 of the Commission's Rules of Practice and Procedure. This report will also be distributed on the following service lists: Rulemaking (R.) 18-10-007 and R.18-12-005.

If you have any questions, please contact Pooja Kishore, Regulatory Affairs Manager, at (503) 813-7314.

Sincerely,

Etta Lockey
Vice President, Regulation

PacifiCorp

Public Safety Power Shutoff (PSPS) watch event October 25, 2020

Post-Event Reporting in Compliance with Rulemaking (R.) 18-12-005 and R. 18-10-007, and includes the information required by Decision (D.) 12-04-024 Section II.A of CPUC Resolution ESRB-8, D.19-05-042 and D.20-05-051.

Submitted November 6, 2020 to the Director of Safety and Enforcement Division (SED)

1. Executive Summary

On October 21, 2020 PacifiCorp began monitoring elevated fire weather conditions which led the company to initiate a PSPS “watch” event. During this period, four circuits were in consideration for de-energization (two complete circuits and portions of the remaining two circuits). These circuits serve 606 customers, of which 29 are classified as critical based upon their standard industrial classification (SIC) codes. No medical baseline or medically vulnerable customers were potentially impacted by this “watch” event. Further details outlining customer classes and notification processes are contained later in this document. While the company staffed the “watch” event both locally and through its support locations, no action to de-energization was taken. During and in advance of the “watch” period, the company teams inspected facilities to ensure they would be resilient to the impending weather, made corrections as needed, placed protective coordination equipment into non-reclose and monitored conditions through the elevated risk period. The company communicated with customers, public safety partners and media to ensure awareness of the elevated risk. Due to the short duration intended, and the uncertainty that de-energization would be necessary the company did not mobilize a community resource center. No specific lessons learned were identified during the period, however, the company continues to recognize that it needs to further evolve its communication and documentation processes in addition to working with community leaders regarding the appropriate use of community resource centers when short duration PSPS events are being “watched.”

2. Decision-Making Process

PacifiCorp utilizes quantitative and qualitative data to determine whether it is appropriate to employ PSPS, which is treated as a measure of last resort. The quantitative data which is used includes those areas designated as high fire risk, which generally correlates to extreme fire threat, as determined by the General Order-adopted Fire Threat Maps. Inputs to the extreme conditions that signal extreme fire risk location include 1) long term drying (which would prime the fuel to be highly favorable to fire spread), using Keetch Byram Drought Index (KBDI), 2) fire weather conditions, using a 6 hour Fosberg Fire Weather Index (FFWI6) and 3) winds exceeding sustained or gust threshold levels. In addition, fire weather warnings, such as Red Flag Warnings may influence its use.

If a day's forecast values exceed the threshold values, a granular (3 hour forecast) is developed for the local area and monitored on a day-by-day basis. If non-coincidence of the exceedances occur, a PSPS "watch" or "action" will not generally be considered, however local teams and emergency operations staff may conduct an internal watch with additional resources sited throughout the focus area, with periodic check-ins during the exposure time. After assessment that a threshold is forecast to be exceeded and the coincidence warrants further advancement of a possible PSPS, review of current fire suppression and public safety partner resources is then incorporated into the decision. A deficiency of those resources to support response to any potential ignitions, or a need for transportation or other infrastructure to be in service (such as water systems) can also impact the use of PSPS due to the risks potentially imposed on the communities that would be de-energized. To the extent that micro-sectionalization can occur (depending on equipment, expected impacted area and electrical connectivity), further time and location details are prepared. Also switching plans, notification plans, GIS data and customers lists are assembled. Depending upon the extent of exceedance, either a "watch" or an "action" may be considered. In this particular case, due to the narrow window of time during which there was forecast concurrency of threshold exceedances, a "watch" was considered. Resources and support personnel were activated to perform pre-inspection, system protective equipment non-reclosing, and event monitoring such that if conditions worsened, could have resulted in rapid notification and de-energization. However, during this event monitored weather stations and deployed resources did not alert that such escalation was required.

Description of all factors considered in the decision to de-energize, including thresholds for wind speed, temperature, humidity, and vegetation moisture in the vicinity of the de-energized circuits.

The following list outlines the key criteria including long term drying, fire weather metrics and wind speed in the vicinity of the de-energized circuits as reviewed in the decision to de-energize for public safety:

Table 1. Key event criteria in the decision to de-energize.

Description	Threshold	Forecast Value	Uncertainty	Actual
Keetch Byram Drought Index (eg fuel moisture)	622.2	770		646
Fosberg Fire Weather Index: 6 hour (temp/humidity)	30	43		38.1
Wind gusts (wind speed)	31	36-38	+/- 4-5	37.38
Vapor pressure deficit (recent drying)	97%	99%		99%

In addition, the decision is further informed by certain external issues, such as:

- Red flag warnings
- Availability of fire suppression resources
- Input received about need for electric supply to support key public safety partner locations

- Observer input regarding weather impacts to electrical equipment and positioned at key risk locations
- Input regarding any observed precipitation (or other meteorological input) that could indicate limits to fire spread risks.

While each of the thresholds was forecast to be met, the lack of coincidence, augmented by field and station observations resulted in a successful “watch,” i.e. de-energization was not required.

Evidence that safety thresholds were exceeded at a circuit level to support the geographical extent of the de-energization event.

Granular and specific circuit level forecasts were prepared to determine that de-energization was considered at a precise level, as outlined below.

Evidence to demonstrate that there was an imminent and significant risk that strong winds may bring tinder dry fuels into contact with its facilities or would cause major vegetation- related impacts on its facilities during periods of extreme fire hazard.

Beginning as early as October 21, 2020, forecasts from the National Weather Service included a Red Flag Warning for critical fire weather conditions and the potential for elevated winds (both gusts and sustained) for the upcoming forecast periods, notably culminating on October 25, 2020. As a result, PacifiCorp’s forecast service provided periodic granular forecasts to identify the coincidence of fire weather, long term and short term fuel dryness and elevated wind. These products identified that gusts, in combination with elevated fire weather conditions (as measured by Fosberg Fire Weather Index (FFWI)) in combination with long term dryness, as measured by the Keetch Byram Drought Index (KBDI) suggested that exceedance of all thresholds concurrently could occur in two areas, Happy Camp and a portion of Del Norte County electrically-connected to PacifiCorp’s Cave Junction, Oregon service area. These granular forecasts can be found in Appendix B.

A description of the alternatives to de-energization considered as part of the decision-making process and any mitigation measures used to decrease the risk of utility-caused wildfire(s) in the area(s) that were subsequently de-energized.

As fire weather metrics materialize, there are limited alternatives to PSPS. These include patrols, modification of system protective settings (to non-reclosing) and reducing the footprint of the PSPS impacted area and the event’s duration.

To support the ability to limit the duration and extent, incorporation of appropriate weather data to inform models is needed. As such, PacifiCorp retained weather forecasting support and began deploying weather stations in its PSPS areas in 2019. These stations are in place to provide granularity, and provide closely correlated readings for the equipment for which they signal “situational awareness.” They are compared against weather patterns to address the normal variation seen at those stations (versus forecast models). They are key during the time that elevated risk periods are being experienced. In addition to those stations within PSPS areas, other bordering stations are reviewed to support minimization of the impacted footprint and limiting the time for which it is in effect. This is the most reasonable alternative available that limits community risks concurrent with limiting fire risk.

As discussed previously, local response teams, which include line personnel and vegetation management personnel actively assess the current condition of the network and use this information, in addition to their real-time observations of weather and its impact to utility assets to inform the operational actions. This

information is aggregated and compared against real-time monitoring information from the weather stations, contrasted against current and forecast observations to establish when it is appropriate to terminate the PSPS operation, be it a “watch” or an “activation.”

Additional information demonstrating the decision to shut-off power was necessary to protect public safety.

During the time preceding and through the watch event, PacifiCorp maintained contact with public safety partners to ascertain the local impacts that any potential de-energization might create. As outlined previously, this action remained a “watch” event and did not result in de-energization.

Determination that the benefit of de-energization outweighed potential public safety risks.

As discussed above, local conditions did not concurrently materialize in a manner to necessitate de-energization.

Additional matters that may be relevant to the Commission’s assessment of the reasonableness of the utility’s decision to de-energize.

Appendix A, B, and C detail information supporting the usage of PSPS, which highlight the extent to which exceedance of fire weather metric thresholds, availability of public safety partners for fire spread management and the limited impact (due to short duration, small customer base impacts) warranted the use of a PSPS “watch.”

Documentation that the utility provided on its website a thorough and detailed description of the quantitative and qualitative factors that contributed to the decision to call, sustain, or curtail each de-energization event. This must include an explanation for why the utility considered a de-energization event to be a last resort. The utility must also set out the conditions that must be present for the de-energization event to be concluded.

Detailed website notifications can be found in Appendix D. The company worked to develop added content to its website, outlining the quantitative and qualitative factors contributing to the decision to call, sustain, or curtail each possible de-energization event.

3. Description of the De-Energization Event

This section includes the facts and details of the potential de-energization event.

When de-energization was initiated.

On the morning of October 21, 2020, forecast conditions indicated that elevated fire weather could be experienced during October 25, 2020. As a result, the company activated its emergency action center and initiated a PSPS “watch” event, wherein it identified the conditions and the area in which de-energization might be required.

When the “All Clear” was declared by the Officer in Charge.

After closely monitoring dry, windy weather conditions throughout the day, Pacific Power ended its PSPS watch early at 6:00 p.m. on October 25, 2020 for high-fire risk areas in the Illinois Valley area of southern Oregon and Happy Camp, California. Weather conditions did not necessitate a power shutoff. The weather

watch and line patrol was part of a proactive effort to provide situational awareness in the face of potentially hazardous weather conditions. Customers and external communications were notified that the “all clear” had been called and no de-energization would take place.

Details of De-Energization Event

PacifiCorp field and management personnel continued to monitor wind speeds and gust during the day, in the event that a circuit de-energization would need to occur. These conditions did not necessitate a de-energization action.

When re-energization began.

There was no de-energization during the event.

The starting and ending time of the forecasted and the actual weather event.

Based on weather forecasts from Wednesday, October 21, PacifiCorp became aware of elevated fire weather conditions. Then on Friday, October 23, the company determined that the potential for circuit de-energization would be from 7:00 a.m. to 8:00 p.m. on October 25, 2020. Decisions to initiate and conclude a PSPS event, are made based on a number of factors. PacifiCorp uses each of its fire weather metrics, compared against current and forecast conditions to establish the ability to de-energize or resume normal operations. During the watch event, the company compared real time data against gusts and Fosberg Fire Weather Index (both instantaneous and 6 hour average) to establish that the elevated risk period had passed.

The geographic location of the event and the areas affected by the de-energization, classified as Zone 1, Tier 2, or Tier 3 High Fire Threat Districts (HFTDs) according to the definition in General Order 95, Rule 21.2-D.

The map below shows a broad overview of the area and its location relative to HFTDs.

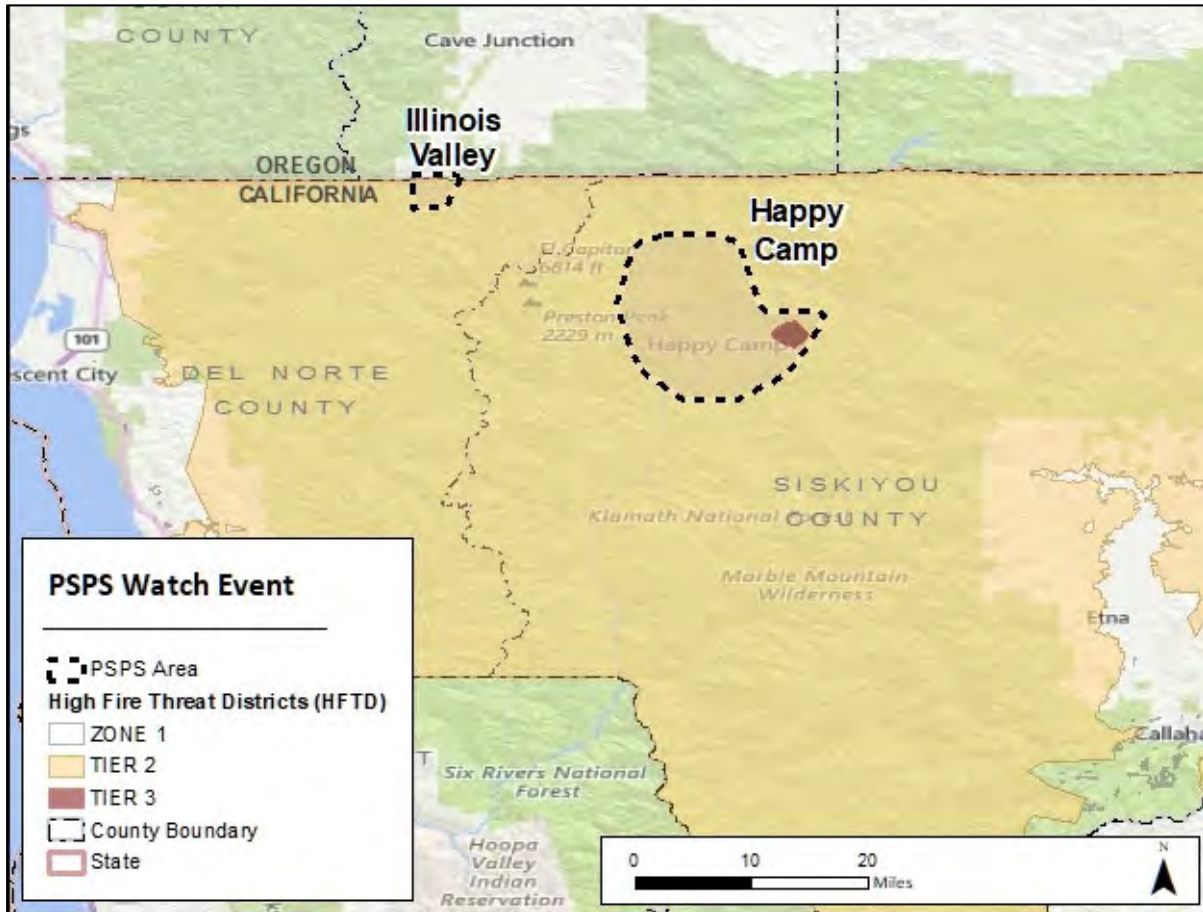

Figure 1. Happy Camp and Illinois Valley PSPS watch event areas and HFTDs.

Total count of affected customer accounts broken down by customer classification (e.g. residential, small business, large commercial/industrial, medical baseline, other medical needs).

No customers were affected during the event.

Table 2. Affected Customers by Customer Classification

Circuit ID	Total # Customers Out	Residential	Small Business	Large Commercial/Industrial	Medically Baseline	Other
5G14	0	0	0	0	0	0
5G16	0	0	0	0	0	0
5G39	0	0	0	0	0	0
5R106	0	0	0	0	0	0

Total count of customer accounts broken down into Tier 1¹, Tier 2 HFTD, Tier 3 HFTD, and Non-HFTD areas.²

The table below provides an overview of customer transformer location classified as Tier 1, Tier 2, Tier 3, and Non-HFTD by customer circuit.

Table 3. Customer transformer locations by HFTD areas

Circuit ID	Total # Customers	Tier 1	Tier 2 HFTD	Tier 3 HFTD	Non- HFTD
5G14	48	0	48	0	0
5G16	518	0	518	0	0
5G39	6	0	6	0	0
5R106	17	0	17	0	0

De-Energization Data Reporting

Table 4: De-Energization Circuit Data

Circuit ID	County	Date/Time De-Energization	Date/Time "All Clear"	Date/Time Re-Energization	Total Customer Account De-Energization
5G14	Siskiyou	n/a	10/25/2020 6:00 p.m.	n/a	0

4. Mapping of the De-Energization Event

This section includes maps of the PSPS watch event including transmission and distribution circuits, High Fire Threat Districts (HFTD), weather stations, the location of any damaged equipment during the event, and transformers which experienced a de-energization.

During the PSPS watch no outages occurred and no customers were de-energized.

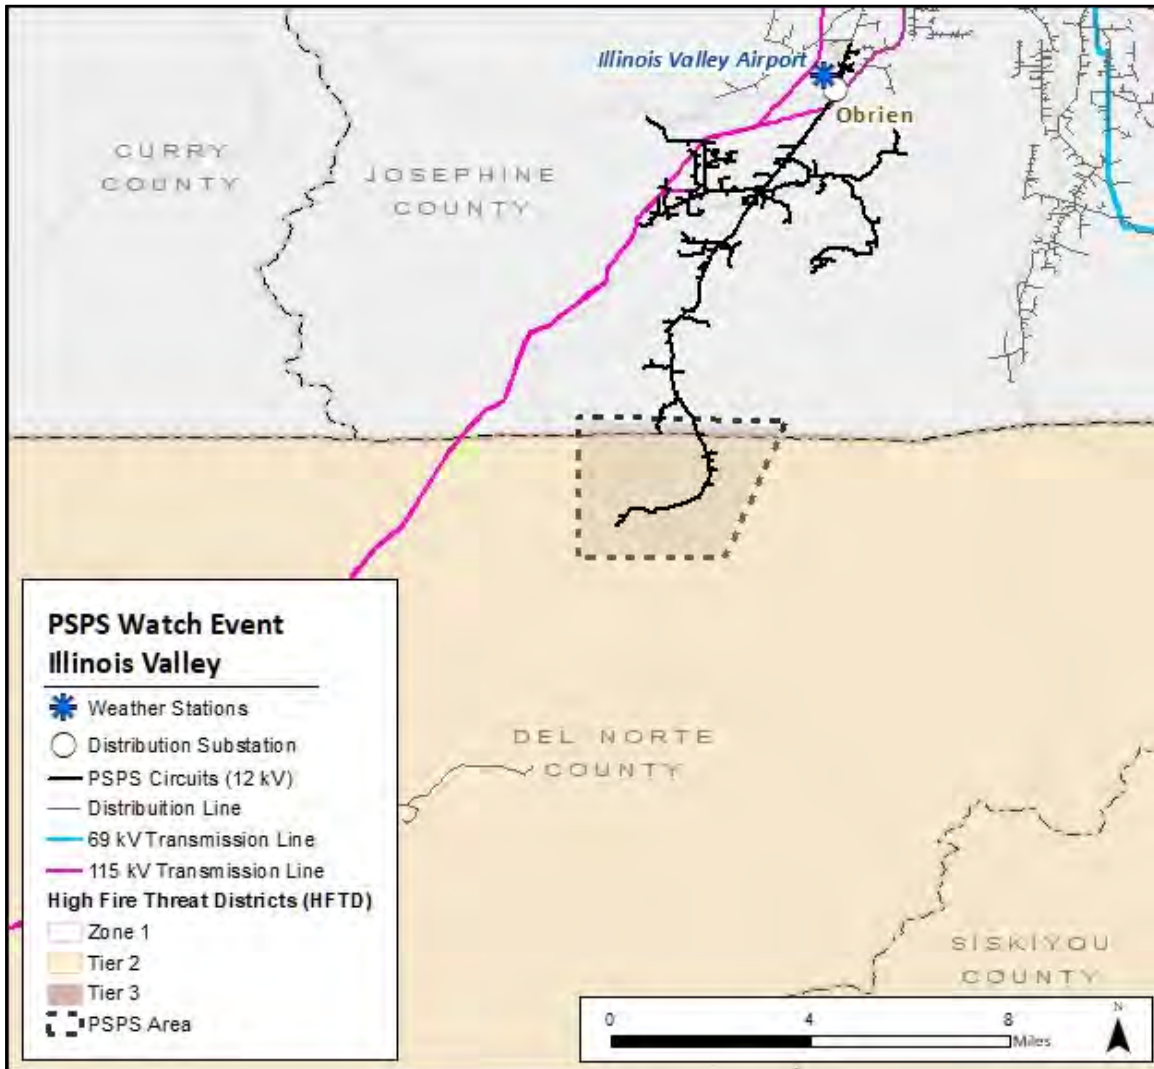

Figure 2. Illinois Valley PSPS watch event area and circuits, HFTD, and weather station locations.

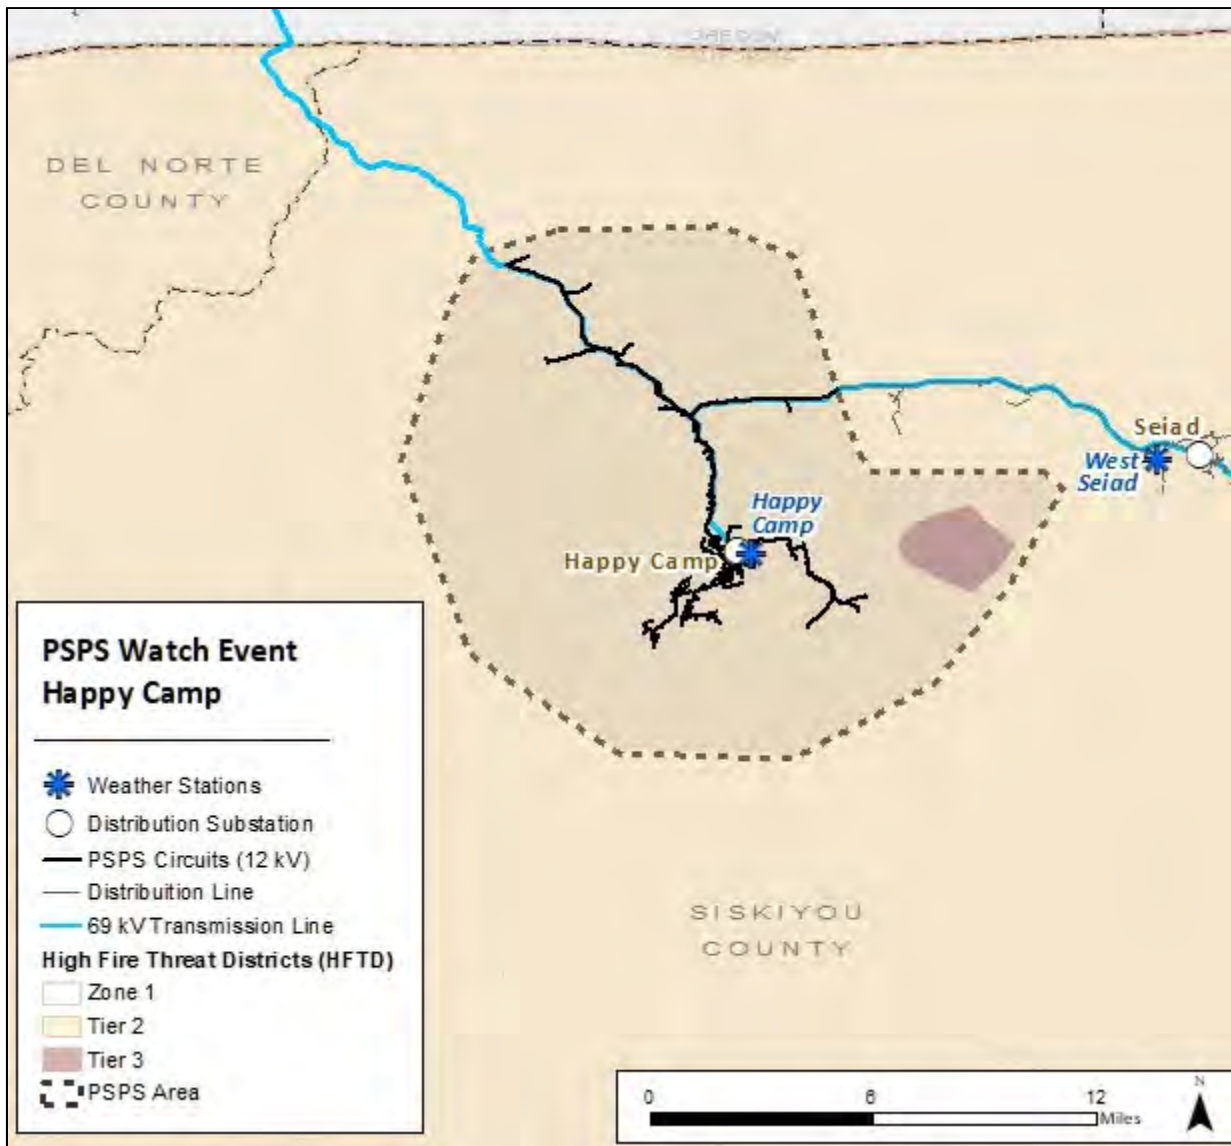

Figure 3. Happy Camp PPS watch event area and circuits, HFTD, and weather station locations.

5. Mitigation Measures Taken to Reduce the Scope and Duration of the De-Energization Event

This section describes how the company sought to reduce the geographical extent and/or duration of the de-energization event.

Sectionalization, considered and implemented and its impact to the size and scope of the de-energization event.

As discussed previously, PacifiCorp's PSPS plan includes micro-sectionalization, time and duration minimization to limit the impacts of de-energization. Additionally, real-time conditions did not worsen, thus no de-energization took place.

Other measures relied on as alternatives to shutting off power.

As outlined previously, locally staged personnel inspect and during exposure periods monitor conditions in real time as alternatives to de-energization. Approximately a dozen linemen, 7 contract tree crews, 3 foresters and 2 vegetation inspectors, in addition to their local management, were on site during the duration of the exposure period.

A description of risk-based models employed for prioritizing the de-energization of lines.

The company evaluates all fire weather conditions and is piloting the real time application of the California Energy Commission's Pyregence program to assess local risks from fire weather and de-energization.

6. Damage to Electrical Facilities during the De-Energization Event

This section includes a description and photos of any damage to the utility's facilities in the areas where power was shut off. This damage includes, but is not limited to, damage caused by weather or fire.

No equipment was damaged during the PSPS watch event. Lineman and vegetation crews were onsite prior to and during the event inspecting equipment and surrounding vegetation, clearing vegetation and repairing areas where possible issues could arise.

Table 6: Damages to Electrical Facilities during the De-Energization Event

Circuit ID	Zone/Tier ³	Did the damage occur in a HFTD (Y/N)	Description of Damage Found and Likely Cause	Distance of damage to nearest weather monitoring device	Wind speed at nearest measuring device when damage occurred	Date of when vegetation management & grid hardening was most recently conducted
5G14	Tier 2	No	n/a	n/a	n/a	n/a
5G16	Tier 2	No	n/a	n/a	n/a	n/a
5G39	Tier 2	No	n/a	n/a	n/a	n/a
5R106	Tier 2	No	n/a	n/a	n/a	n/a

³ Per the definition in General Order 95, Rule 21.2-D

7. Description of Customer Notifications and Communications

This section provides descriptions of customer notifications.

Copies of all notifications, the timing of notifications, the methods of notifications and who made the notifications (e.g., the utility or local public safety partners).

At approximately 5:30 p.m. on October 23, 2020, PacifiCorp began notifying affected customers of a potential PSPS event. Outreach began with personnel making phone calls to public safety officials, community partners, critical customers and medically sensitive customers. As customer contact was made those for whom geographic information system (GIS data) would be helpful (i.e. public safety partners) were offered access to the GIS files, which was a direct outcome of feedback from PacifiCorp’s prior PSPS reporting in October. Additionally, the table below outlines direct communication efforts made to these customers.

Table 7: Critical customers contact summary.^{4 5}

In addition, notification emails were sent to regulators. After individual calls were completed, automated outbound calls, emails and text messages were sent, followed by updates to the company website and a media release.

The following subsequent notifications were sent via automated outbound calls, text messaging, social media, and media advisory releases. In addition, customers who were directly contacted the prior day and requested follow up phone calls were contacted again with a direct phone call.

- At 7:00 a.m. on October 24, customers were updated on the status of the potential PSPS event for October 25.
- At 7:00 a.m. on October 25, customers were updated on the continuation of the PSPS watch, through 8 p.m. that evening.
- At 6:00 p.m. on October 25, customers were notified of the ending of the PSPS watch.

Throughout the event customer service, field personnel, and management were available and responding to inquiries as they came in via phone call or on social media. Appendix D contains copies of all notifications which were provided by automated outbound calls, emails, text, social media, company website, and media releases.

Customers where positive notification was attempted

Below is an account of the number of notification attempts made, the timing of attempts and the number of customers for whom positive notification was achieved. For detailed information regarding the critical customer direct notifications, including who made the notification attempt (e.g. the utility representative or local public safety partner), refer to table 7. Table 8 below outlines the communication made to customers which are not identified as critical. These outbound calls were made by the company's customer service center.

Table 8: Non-critical customer notification summary.

October 25, 2020, PSPS Watch Event					
Notification Attempt Date/Time	Notification Type	# Positive Notification ⁶			# Unsuccessful Notifications ⁷
		Phone	Text	Email	
10/23 - 5:30 p.m.	Watch	588	161	299	10
10/24 - 7:00 a.m. ⁸	Watch	587	n/a	n/a	34
10/25 - 7:00 a.m. ⁹	Watch	581	n/a	n/a	40
10/25 - 6:00 p.m.	Watch	585	161	299	14

An explanation and number of any false communications, including citations of sources of changing data.

Table 8 above indicates the number of false communications which occurred during the PSPS watch event. The company makes every attempt to notify customers of a PSPS event, using the customer provided contact data in their account, providing updates by phone, email, and text.¹⁰ In addition, the company also provides updates through social media, to news outlets and to local public safety partners. Within the media notifications, company contact information is provide to answer any questions from customers or to update their account information. In cases where the automated calling system detects that a customer did not answer, two additional contact attempts are made. After all attempts, the customer is flagged. In addition to calls, the system also tracks attempts via text and email.

Evidence that the company provided impacted communications carriers with the relevant meter and circuit IDs that were being de-energized at least 72 hours before a de-energization event.

Table 7 above outlines the date and time each communication carrier was notified of the PSPS watch event. Communication carriers which had multiple locations within the PSPS area were provided with location details.

Table 9: Failed Notification Overview

⁶ The system attempts to notify the customers by phone in three call attempts. In addition to calls texts and emails are also sent.

⁷ Unsuccessful notifications are classified as any notification where an unsuccessful call, text, or email was flagged in the system. Notifications are flagged by Intrado (automated notification system) as, busy signal, fax machine, missing or invalid contact number, no answer, operator intercept, or other failure.

⁸ No text or email notification sent on 10/24 at 7 a.m.

⁹ No text or email notification sent on 10/25 at 7 a.m.

¹⁰ Communications are sometimes limited by the amount of information the customer is will to include in their account.

Description	Number of Customer Accounts
Total number of customer accounts who did not receive any advance notification before a de-energization event was initiated.	n/a (No customers were de-energized during the PSPS watch event)
Total number of customer accounts who did not receive notification immediately before their power was turned back on.	n/a (No customers were de-energized during the PSPS watch event)
Total number of customer accounts who did not receive notification when re-energization was completed.	n/a (No customers were de-energized during the PSPS watch event)

Table 10: Timing of Delivered Notifications, by Entity Type

Description	Number of Customer Accounts
Number of customer accounts of public safety partners/priority notification entities who did not receive 48- to 72-hour advance notification.	0
Number of customer accounts of public safety partners/priority notification entities who also did not receive 1- to 48-hour advance notification.	0
Number of customer accounts of public safety partners/priority notification entities who were not notified, or received notification less than 1 hour before de-energization.	0
Number of customer accounts of critical facilities who did not receive a 24-48 hour advance notification.	0
Number of customer accounts of critical facilities who did not receive 1-24 hour advance notification.	0
Number of customer accounts of critical facilities who were not notified, or received notification less than 1 hour before de-energization.	0
Number of customer accounts of all other affected customers/populations who did not receive 24-48 hour advance notification.	10
Number of customer accounts of all other affected customers/populations who did not receive 1-24 hour advance notification.	34
Number of customer accounts of all other affected customers/ populations who were not notified, or received notification less than 1 hour before de-energization.	0
Number of customer accounts of medical baseline/critical care customers who did not receive 24-48 hour advance notification.	0
Number of customer accounts of medical baseline/critical care customers who did not receive 1-24 hour advance notification.	0
Number of customer accounts of medical baseline/critical care customers who were not notified, or received notification less than 1 hour before de-energization.	0

8. Community Resource Centers, Access and Functional Needs (AFN) Customer Needs Assessments, and Evacuation Plans

This section describes PacifiCorp's efforts to establish community assistance locations and address customer needs during the de-energization event.

The address of each community assistance location during a de-energization event, and a description of the location (e.g. a building, van, tent).

No de-energization occurred during the event, therefore no Community Resource Center was opened.

A description of the services available at each community assistance location, and if the location was able to meet the required hours of 0800-2200.

No de-energization occurred during the event, therefore no Community Resource Center was opened.

The number of days/hours the location was open.

No de-energization occurred during the event, therefore no Community Resource Center was opened.

An evaluation of the implementation of the Community Resource Center (CRC) Plan during this de-energization event. This evaluation must cover how the safety needs of vulnerable populations were met, whether any improvements to this plan were identified through the lessons learned exercise, and how these will be addressed.

No de-energization occurred during the event, and the targeted duration was quite limited, therefore no Community Resource Center was opened, nor planned to be opened. In addition, there were no critical or medical baseline customers within the PSPS watch event area. PacifiCorp plans to further collaborate with public safety partners to better establish protocols around the use of Community Resource Centers for future PSPS events.

A description of actions taken to collaborate with public safety partners, local governments, and representatives of people and communities with access and functional needs to give any needed assistance during the de-energization event, pursuant to the utilities' annual needs assessment plans. This must include whether any improvements to this plan were identified through the lessons learned exercise and how these will be addressed.

No de-energization occurred during the event, and the targeted duration was quite limited, therefore no Community Resource Center was opened, nor planned to be opened. In addition, there were no critical or medical baseline customers within the PSPS watch event area. PacifiCorp plans to further collaborate with public safety partners to better establish protocols around the use of Community Resource Centers for future PSPS events.

A description of any actions taken in response to evacuation plans for current and potentially eligible medical baseline customers during the de-energization event. This must include whether any improvements to this plan were identified through the lessons learned exercise and how these will be addressed.

No medical baseline customers would have been impacted within the PSPS area, thus evacuation contingency plans were not required.

9. Engagement with Local and State Public Safety Partners

This section describes and evaluates of engagement with local and state public safety partners in providing advanced education, outreach, and implementation of applicable resiliency and safety programs during the de-energization event.

An evaluation of the implementation of the Transport Resiliency and Electric Vehicle Plans during this de-energization event. This must include any difficulties associated with the execution of these plans, the identification of lessons learned and how these will be addressed.

PacifiCorp identified all accounts that serve as transportation delivery points which would have been impacted by the “watch” PSPS, treating them as critical accounts for notification purposes, essentially resolving the concern for transportation resiliency impacts.

10. Complaints and Claims

This section summarizes the nature of complaints received as a result of the de-energization event, and any claims filed against the utility as a result of the de-energization event.

As of November 4, 2020, PacifiCorp has received no customer complaints or claims related to the PSPS watch event which occurred on October 25, 2020.

Table 11: Claims Resulting from De-Energization Event¹¹

Claimant Type (e.g. commercial, residential)	Division	Claim Number	Claim Type Description	Justification of Claim	Claim Demand (\$)
n/a	n/a	n/a	n/a	n/a	n/a

Table 12: Complaints Resulting from De-Energization Event¹²

Complaint Type (e.g. commercial, residential)	Division	Complaint Number	Text of Complaint	Action taken by the utility to mitigate complaint
n/a	n/a	n/a	n/a	n/a

11. Aftermath and Re-Energization

This section describes the steps taken to restore power, and notifications to the public during inspection and re-energization efforts after the conclusion of conditions which necessitated the de-energization event.

The timing of re-energization, including how long after de-energization did this re-energization occur.

No de-energization occurred during the event.

¹¹ No circuits were de-energized during the PSPS watch event.

¹² No circuits were de-energized during the PSPS watch event.

A description of the steps taken to re-energize as quickly as possible as and no later than within twenty-four hours following the end of weather conditions that necessitated the de-energization.

No de-energization occurred during the event.

For any circuit that was not re-energized within the twenty-four hour timeframe following the end of weather conditions that necessitated the de-energization, the utility must provide evidence and an explanation as to why it was necessary to exceed the twenty-four hour timeframe.

No de-energization occurred during the event.

Evidence that public safety partners (including communications carriers) were notified within one hour of the utility knowing it will re-energize its lines. This must include supplying the public safety partners with the relevant meter and circuit IDs to be re-energized.

No de-energization occurred during the event, however once the “all clear” was called, all previously-notified customers and public safety partners were apprised of the improved fire weather conditions and the return to normal operations.

Confirm whether there was a request for mutual assistance before, during, or after the de-energization event to re-energize faster.

No de-energization occurred during the event.

12. Identification and Application of Lessons Learned

This section provides an explanation of how lessons learned from previous de-energization events affected this event, as well as lessons learned from the current de-energization event.

Lessons learned from the current de-energization event (including, but not limited to, lessons learned on notifications, re-energization, IT/communication resources, backup generation for critical facilities, etc.).

PacifiCorp is continuing to develop and update processes around notification and documentation of events, in an effort to create and increase cohesive communication and documentation between various departments involved in PSPS events.

Evidence that demonstrates efforts based on prior lessons learned to mitigate the adverse impacts on the customers and communities.

As noted previously, the company’s prior PSPS event resulted in feedback that access to GIS data through shape files was not easily available. As a result, the company during its notifications to public safety partners immediately advised them of the opportunity and provided such files upon request.

13. Any recommended updates to the de-energization guidelines

Suggested updates to the guidelines which may improve the implementation of de-energization events.

At this time, PacifiCorp has no recommendations related to guidelines that have been adopted during the development of PSPS protocols.

Appendix A – Daily Weather Forecasts

Daily Forecast - October 21, 2020

Wednesday October 21, 2020 Issued 9:00 am

Highlights: North winds become rather breezy today as a trough pushes through the Pacific Northwest and into the Northern Rockies. Less gusty conditions are expected through the rest of the week but northerly flow will remain breezy at times. Another system drops south on Saturday and turns flow a bit more northeasterly, but computer models suggest the strongest winds aloft may not mix down to the surface in the Mt. Shasta area.

SHORT TERM FORECAST

TODAY	6HrMax		6Hr	Wind	Wind	Max	Min	Cautionary Notes:
	KBDI	FFW16	Wind	Gust	Dir	Temp	RH	
Happy Camp	769	19	10	25	NE-NW	72	37%	North winds begin increasing after a dry front moves through the region. Winds may manage to gust near to above 30mph in some spots, likely strongest in the Mt. Shasta area.
Weed	715	27	14	30	NW-N	65	36%	
Mt. Shasta	761	29	15	33	NW-N	64	38%

Extended Forecast Synopsis:
 A trough is expected to dive south out of British Columbia on Saturday to keep northerly winds a bit breezy along with a very slight chance for a shower. The system then drops into Northern California on Sunday and winds remain breezy. Strong winds will be present over higher elevations but computer models suggest that winds may remain a bit lighter in the Mt. Shasta City area.

Daily Forecast - October 22, 2020

Thursday October 22, 2020 Issued 9:00 am

Highlights: Winds remain slightly breezy today as flow turns more northeasterly and temperatures remain relatively cool. Similar conditions are expected tomorrow with slightly warmer temperatures as winds become a bit more northwesterly. Less breezy with a very slight chance for a shower Saturday as the next system begins to arrive. Breezy offshore flow returns on Sunday along with cool and dry conditions.

SHORT TERM FORECAST

TODAY	6HrMax		6Hr	Wind	Wind	Max	Min	Cautionary Notes:
	KBDI	FFWI6	Wind	Gust	Dir	Temp	RH	
Happy Camp	769	23	9	21	NE	63	16%	Winds likely decrease from yesterday in the Mt. Shasta area as flow turns more northeasterly. Happy Camp likely sees winds similar to yesterday.

Daily Forecast - October 23, 2020

PacifiCorp CA Weather

Friday October 23, 2020 Issued 9:00 am

Highlights: Winds relax some today with warmer conditions. A trough of low pressure will dig south into the Intermountain West as high pressure strengthens and pushes inland over the Pacific NW, resulting in a significant offshore flow event on Sunday. Winds relax and temperatures rebound quickly as high pressure settles further inland heading into the middle/end of next week.

Daily Forecast - October 24-25, 2020

No Daily Forecast was performed for the area on Saturday or Sunday, since granular forecasts were performed and updated over the weekend.

Daily Forecast - October 26, 2020

PacifiCorp CA Weather

Monday October 26, 2020 Issued 9:00 am

Highlights: Winds weaken substantially today with very dry and mild conditions in place. Temperatures warm up dramatically Tuesday as high pressure shifts further inland. Light southerly/onshore flow resumes towards the end of the week and over the weekend.

Thursday	771	14	5	14	SW-W	80	13%
Friday	771	20	8	20	SW-W	77	20%
Saturday	771	12	5	15	NW-NE	79	23%
Sunday	772	14	5	15	N→W	80	13%

Extended Forecast Synopsis:
 High pressure shifts further inland on Thursday allowing weak southerly flow to develop. On Friday, a weak trough of low pressure passing to the north may slightly enhance southerly flow. Medium and long-range models suggest that high pressure may remain the dominant feature keeping mild and dry conditions in place heading into next week with generally light winds.

Daily Forecast - October 27, 2020

PacifiCorp CA Weather

Tuesday October 27, 2020 Issued 9:00 am

Highlights: A blocking ridge of high pressure will allow a warming trend to continue through the end of the week. A weak trough passing well to the north may subtly enhance southerly/onshore flow on Thursday and Friday. Otherwise, no precipitation or significant wind events are anticipated over the next 7 days.

Friday	771	19	7	18	SW-W	79	14%
Saturday	771	13	5	15	NW-NE	78	17%
Sunday	772	13	5	14	NW-NE	80	15%
Monday	772	14	5	15	NW-NE	81	14%

Extended Forecast Synopsis:
 High pressure weakens and shifts south on Thursday and Friday, allowing a weak trough to track inland across BC and WA. This may subtly enhance southerly/onshore flow, however, winds appear remain light at this time. With high pressure rebuilding through the weekend look for seasonably mild and dry conditions to continue through at least Monday.

Appendix B – Granular Weather Forecasts

Granular Forecast on 10/21/2020

Cave Junction PDZ Forecast Valid 10/24 - 10/26/20

COMMENTS: A fairly strong trough of low pressure is expected to slide inland over the Pacific NW on Friday and Saturday, though computer models still remain uncertain regarding its exact path. If it drops further south before sliding inland, some shower activity may be possible Friday night and Saturday morning. Otherwise, conditions remain dry. On Sunday, high pressure nudges inland as the trough retrogrades SW into the Great. As it does so the potential increases for a possibly strong offshore flow wind event for Northern California.

Granular Forecast on 10/22/2020

Cave Junction (CA) PDZ Forecast for 10/24 - 10/26/20

COMMENTS: A trough of low pressure will drop south through the Pacific NW on Saturday as a weak cutoff low drifts inland to the south. High pressure strengthening over the NE Pacific will set the stage for an offshore wind event on Sunday. Computer models have continued to back off regarding any prospect for rain Saturday. Look for east/NE winds to gradually strengthen late Saturday night or Sunday morning. Meanwhile, RH values are expected to drop rapidly as winds accelerate. This may result in fire weather indices reaching, or exceeding thresholds by early afternoon Sunday. Winds may stay fairly active through Sunday night (for Del Norte County).

Granular Forecast on 10/23/2020

Cave Junction (CA) PDZ Forecast Valid 10/24 - 10/26/20

COMMENTS: Look for NE winds to gradually strengthen late Saturday night or Sunday morning as a trough of low pressure drops south into the Great Basin. As offshore winds strengthen RH values will drop rapidly. This event appears very comparable (for northern CA) to the September 8th offshore flow event, though computer models are indicating that it could be stronger. Winds will likely be strongest down the Hwy 199 corridor between Cave Junction and O'Brien. As the terrain gets more mountainous further south, gusty winds will be more erratic channeling down steeper, straighter mountain valleys and canyons.

Appendix D – Communication Details

The following are copies of all notifications provided to customers prior to and during the event. They include the date and approximate timeframe of the notification, the method of notification and detailed information about the event. All of the below notifications were initiated and completed by internal staff using outbound call, text and email systems.

Public Safety Power Shutoff – Illinois Valley and Happy Camp

October 23, 2020, 5:00 p.m. – 6:00 p.m.

Watch Notification 1

Phone and Email Script

Hello this is Pacific Power with an important safety message. We are actively monitoring forecasted weather conditions in your area for a potential Public Safety Power Shutoff on Sunday, October 25.

High, gusty winds combined with low humidity and dry conditions can result in flying debris coming in contact with power lines and escalating wildfire risk. We will continue to monitor these conditions and will provide updates should we need to issue a Public Safety Power Shutoff in your area.

The PSPS watch covers the communities of Selma, Dryden, Kerby, Cave Junction, Holland, O’Brien, Takima and Happy Camp. Approximately 5,800 customers are in the PSPS watch area. The estimated duration of the event is from 7 a.m. to 8 p.m. on Sunday, October 25.

You can use the interactive map at www.pacificpower.net/psps to see if you are located in a PSPS area. We encourage you to be prepared and have an outage kit ready.

The next notification of the event will happen at 7 a.m. tomorrow.

Thank you and we appreciate your understanding and patience during this important public safety measure.

FOR IMMEDIATE RELEASE
October 23, 2020

Pacific Power closely monitoring Illinois Valley and northern California areas for wildfire risk and possible Public Safety Power Shutoff

Weather forecast for Sunday is being monitored for possible de-energization of power lines in designated high-fire risk areas

CAVE JUNCTION, ORE. — Pacific Power is closely monitoring weather forecasts in high-fire risk areas in the Illinois Valley area and Happy Camp, Calif. Sunday, October 25, is when a combination of high, gusty winds, low humidity and elevated factors on key weather indexes might require a Public Safety Power Shutoff (PSPS).

The PSPS watch covers the communities of Selma, Dryden, Kerby, Cave Junction, Holland, O'Brien, Takima and Happy Camp. Approximately 5,800 customers are in the PSPS watch area. The estimated duration of the event is from 7 a.m. to 8 p.m. on Sunday, October 25.

“We are issuing a PSPS watch for these areas so our customers can prepare,” said Erik Brookhouse, vice president of system, operations. “It’s important to have an emergency plan and kit prepared year-round. Unlike an outage caused by a winter storm, we know when the power will go out and a good estimate for when it will be safe to turn it back. We will continue to update our customers as more information is available.”

Turning off power during a Public Safety Power Shutoff is done to prevent wind-blown or falling debris from making contact with energized power lines. Pacific Power crews will actively patrol and remove debris from lines and make repairs if needed. Once line inspections are complete and extreme weather conditions have subsided, Pacific Power will re-energize the lines.

Customers have been notified of the watch through phone calls, email and text messages. Customers under the PSPS watch area will continue to receive updates through ongoing communications. Customers can use the interactive map at www.pacificpower.net/psps to see if they are located in a PSPS area.

Customers will receive a status update on the PSPS watch tomorrow, Saturday, October 24 at 7 a.m.

For all non-emergency questions about the PSPS, customers and the public should call Pacific Power at 1-888-221-7070.

Visit pacificpower.net/pmps for additional information on Public Safety Power Shutoffs, wildfire safety and emergency preparedness.

PSPS WATCH NOTIFICATION

Pacific Power is closely monitoring weather conditions in the Illinois Valley area in southern Oregon and Happy Camp, Calif., which are considered high fire risk areas, and we may issue a Public Safety Power Shutoff (PSPS) Sunday, October 25th beginning around 7 a.m. and concluding at approximately 8 p.m.

The measure is a proactive effort to mitigate wildfire risk in the face of hazardous fire weather conditions including extremely low humidity, dry vegetation, elevated levels on key weather indexes and sustained winds and gusts.

Approximately 5,800 customers are under the PSPS watch. Those customers have been notified of the watch through phone calls, email and text messages. Affected customers will continue to receive updates through ongoing communications. Customers are encouraged to be prepared and have an outage kit ready.

For all non-emergency questions about the PSPS, customers and the public should call Pacific Power at 1-888-221-7070.

NOTIFICACIÓN DE VIGILANCIA DE PSPS

Pacific Power está monitoreando de cerca las condiciones climáticas en el área de Illinois Valley en el sur de Oregón y en Happy Camp, California, que se consideran áreas de alto riesgo de incendio. Puede ser emitido un corte de energía por seguridad pública (PSPS) el domingo 25 de octubre a partir de las 7 a.m. y concluir aproximadamente a las 8 p.m.

La medida es un esfuerzo proactivo para mitigar el riesgo de incendios forestales frente a condiciones climáticas peligrosas de incendios que incluyen humedad extremadamente baja, vegetación seca, niveles elevados en índices climáticos clave y vientos y ráfagas sostenidas.

Aproximadamente 5,800 clientes están bajo la vigilancia de PSPS. Clientes han sido notificados de la vigilancia a través de llamadas telefónicas, correo electrónico o mensajes de texto. Clientes afectados seguirán recibiendo actualizaciones a través de comunicaciones continuas. Se les recomienda a todos de estar preparados y tener un kit de emergencias listo.

Para todas las preguntas que no sean de emergencia sobre el PSPS, los clientes y el público deben llamar a Pacific Power al 1-888-225-2611.

PUBLIC SAFETY **POWER SHUTOFF**

For all non-emergency questions about the PSPS, customers and the public should call Pacific Power at 1-888-221-7070.

Public Safety Power Shutoff – Illinois Valley and Happy Camp October 25, 2020, 7:00 a.m. Update Notification 3

Phone Script

Hello this is Pacific Power with an important safety message. The [Public Safety Power Shutoff](#) (PSPS) watch will remain in effect from 7 a.m. today, Sunday, October 25, until 8 p.m.

High, gusty winds combined with low humidity and dry conditions can result in flying debris coming in contact with power lines and escalating wildfire risk. We will continue to monitor these conditions and will provide updates should we need to issue a Public Safety Power Shutoff in your area.

The PSPS watch covers the communities of Selma, Dryden, Kerby, Cave Junction, Holland, O'Brien, Takilma and Happy Camp. Approximately 5,800 customers are in the PSPS watch area.

You can use the interactive map at www.pacificpower.net/psps to see if you are located in a PSPS area. We encourage you to be prepared and have an outage kit ready.

Thank you and we appreciate your understanding and patience during this important public safety measure.

NOTIFICACIÓN DE VIGILANCIA DE PSPS

Pacific Power está monitoreando de cerca las condiciones climáticas en el área de Illinois Valley en el sur de Oregón y en Happy Camp, California, que se consideran áreas de alto riesgo de incendio. Puede ser emitido un [corte de energía por seguridad pública \(PSPS\)](#) el domingo 25 de octubre a partir de las 7 a.m. y concluir aproximadamente a las 8 p.m.

La medida es un esfuerzo proactivo para mitigar el riesgo de incendios forestales frente a condiciones climáticas peligrosas de incendios que incluyen humedad extremadamente baja, vegetación seca, niveles elevados en índices climáticos clave y vientos y ráfagas sostenidas.

Aproximadamente 5,800 clientes están bajo la vigilancia de PSPS. Clientes han sido notificados de la vigilancia a través de llamadas telefónicas, correo electrónico o mensajes de texto. Clientes afectados seguirán recibiendo actualizaciones a través de comunicaciones continuas. Se les recomienda a todos de estar preparados y tener un kit de emergencias listo.

Para todas las preguntas que no sean de emergencia sobre el PSPS, los clientes y el público deben llamar a Pacific Power al 1-888-225-2611.

FOR IMMEDIATE RELEASE
October 25, 2020

Illinois Valley and northern California areas remain under Public Safety Power Shutoff watch

CAVE JUNCTION, ORE. — Pacific Power continues to closely monitor weather in high-fire risk areas in the Illinois Valley area and Happy Camp, Calif. The [Public Safety Power Shutoff](#) (PSPS) watch will remain in effect from 7 a.m. today, Sunday, October 25, until 8 p.m. The company has deployed additional line and vegetation management crews to patrol lines and address hazard trees as needed.

The PSPS watch covers the communities of Selma, Dryden, Kerby, Cave Junction, Holland, O’Brien, Takilma and Happy Camp. Approximately 5,800 customers are in the PSPS watch area.

“With the combination of high, gusty winds, low humidity and elevated factors on key weather indexes, we want to take every precaution to protect these communities,” said Erik Brookhouse, vice president of system operations. “Our teams will continue to be on location throughout the day to monitor weather and power lines so we can respond quickly to any issues.”

Public Safety Power Shutoff events are part of the utility’s comprehensive wildfire prevention plan, which includes additional safety inspections, upgrades to the grid system, and weather stations to monitor for hazardous conditions.

Pacific Power encourages customers to be prepared making sure contact information is updated and the company has your correct phone number and email address on file.

Customers have been notified of the watch through phone calls, email and text messages. Customers under the PSPS watch area will receive an additional update once the PSPS watch concludes or if conditions warrant a PSPS. Customers can use the interactive map at www.pacificpower.net/psps to see if they are located in a PSPS area.

For all non-emergency questions about the PSPS, customers and the public should call Pacific Power at 1-888-221-7070.

Visit pacificpower.net/psps for additional information on Public Safety Power Shutoffs, wildfire safety and emergency preparedness.

Event Conclusion Notification**

Phone and Email Script

Hello, this is Pacific Power with another important update. Forecasts indicate weather conditions are improving in the Illinois Valley and Happy Camp areas. Pacific Power is concluding its active monitoring for wildfire risk in the area and will not be initiating a Public Safety Power Shutoff at this time. For more information, please visit pacificpower.net or call 1-888-221-7070. We appreciate your patience and understanding. Thank you.

NOTIFICACIÓN DE VIGILANCIA DE PSPS

Hola, aquí tiene otra actualización importante de Pacific Power: Los pronósticos indican que las condiciones climáticas están mejorando en las áreas de Illinois Valley y Happy Camp. Pacific Power está concluyendo su monitoreo activo del riesgo de incendios forestales en el área y no iniciará un corte de energía por motivos de seguridad pública en este momento.

Para obtener más información, visite pacificpower.net o llame al 1-888-225-2611.

Apreciamos su paciencia y comprensión. Gracias.

Text Message

We are concluding our active monitoring due to improved weather. A Public Safety Power Shutoff will not be initiated at this time. For more information, please visit pacificpower.net or call 1-888-221-7070. Thank you.

Order Instituting Rulemaking to Examine Electric
Utility De-Energization of Power Lines in Dangerous
Conditions.

Rulemaking 18-12-005
(Filed December 13, 2018)

CERTIFICATE OF SERVICE

I hereby certify that I have this day served a copy of PacifiCorp's **Public Safety Power Shut-Off Report for October 25, 2020 Watch Event** on all known parties to R.18-12-005 by transmitting an e-mail message, or by US Mail if an e-mail address has not been provided, with the document attached to each person named in the official service list.

(See the attached Service List R.18-12-005)

Executed on **November 6, 2020**, at Portland, Oregon.
